Role of protein dimerization

Student: **Orlov Iurii**

Supervisor: **Nikolay Dokholyan**

Department of Biochemistry and Biophysics,
University of North Carolina at Chapel Hill

Dimers and oligomers. Are they overrepresented?

W. Humphrey et al. (1996)

R. Love et al. (2009)

S. Roh et al. (2017)

J. Thoden et al. (1997)

Plan

Тихо-тихо ползи,
Улитка, по склону Фудзи...

The MAIN objective is to understand whether the **oligomeric structure** is **more evolutionary preferable** than monomeric.

General plan of the project is as follows:

1. detect core residues (CR) responsible for structure formation
 2. determine how number of CR grows with protein length
 3. compare obtained results with dimeric proteins
 4. go further for larger oligomers (n-mers) to find the most preferable n
-
- } analysis of monomeric protein families with **similar structures**
- for CR in subunits interface

Steps:

1. Start to study related literature

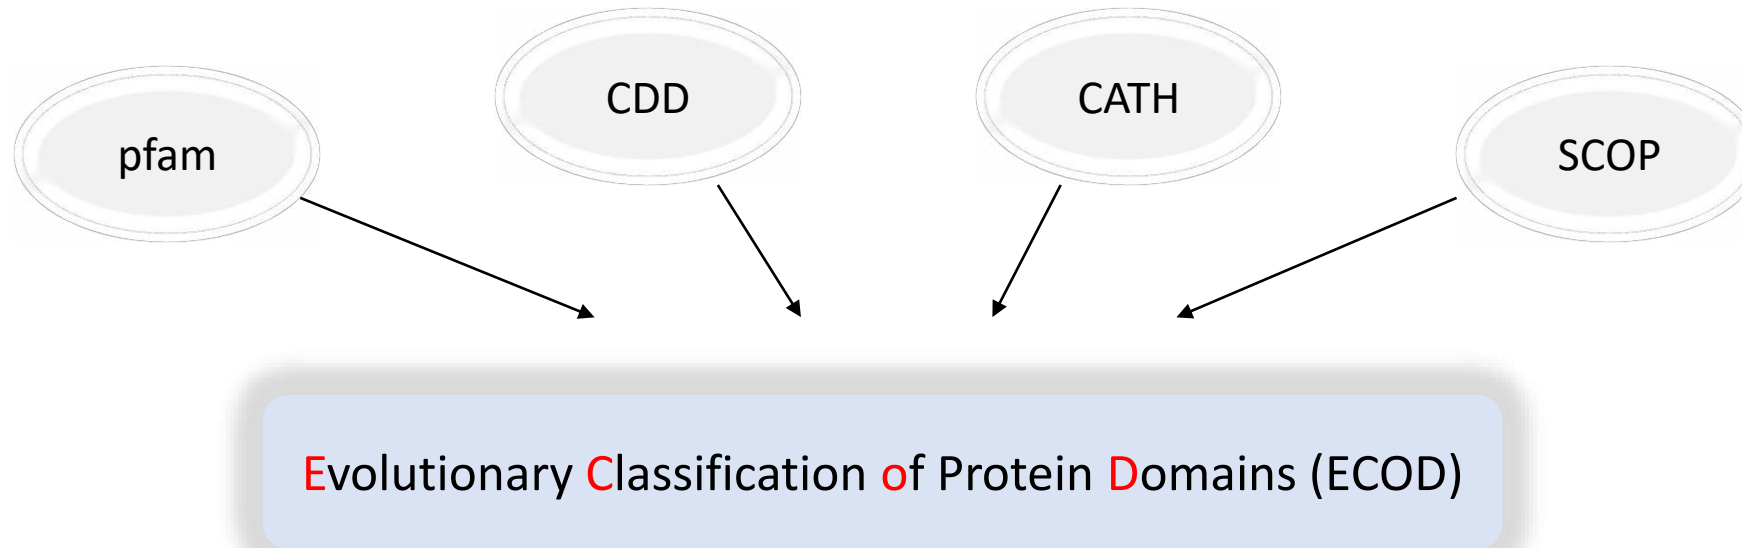

Steps:

1. Start to study related literature
2. Select database containing information about proteins with similar structures and collect data

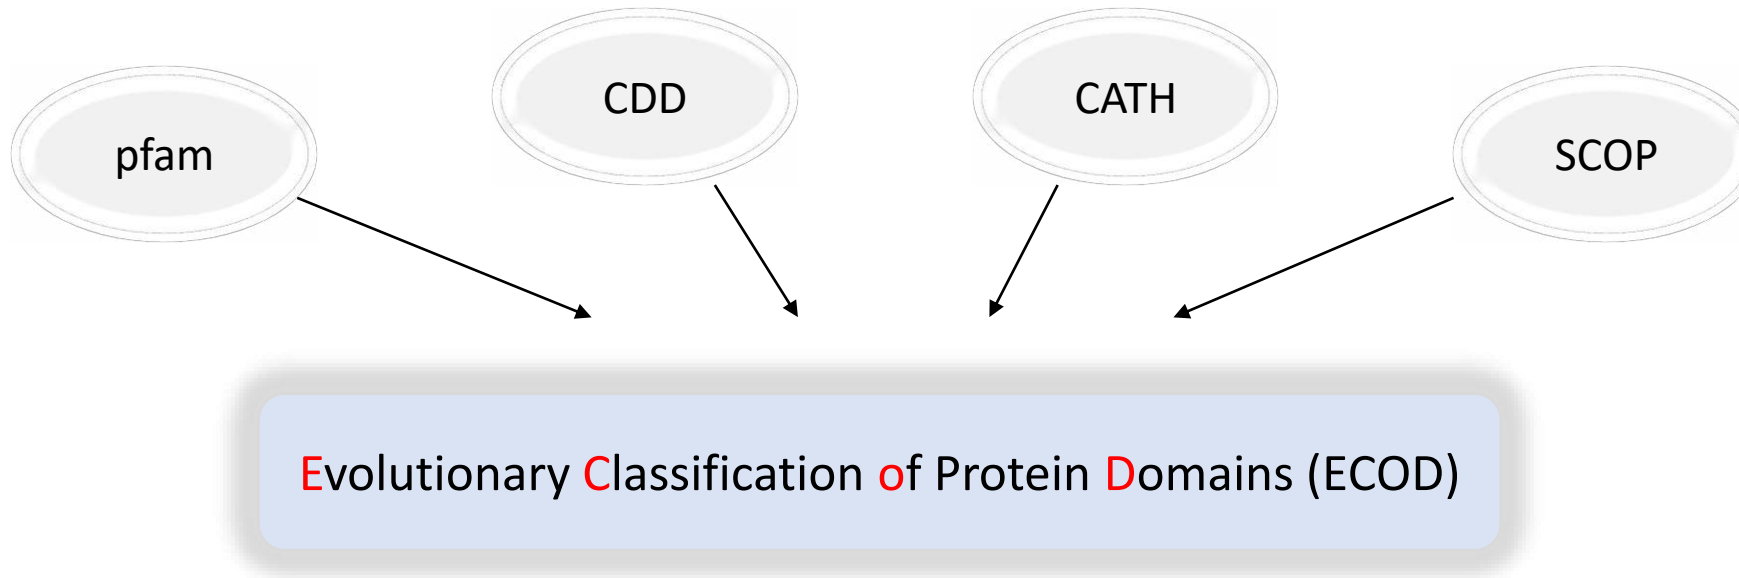

Steps:

1. Start to study related literature
2. Select database containing information about proteins with similar structures and collect data

Steps:

1. Start to study related literature
2. Select database containing information about proteins with similar structures and collect data

3. Find core residues!

$$S_i = - \sum_j^{n_i} P(\sigma_j) \log_2 P(\sigma_j)$$

$P(\sigma_j)$ – probability of σ_j residue on i^{th} position

And then...

Steps:

4. Find relationship between number of core residues and length of aa chain

Steps:

4. Find relationship between number of core residues and length of aa chain
5. Collect information about protein dimers and residues that form their subunits interface

G. Ackers et al. (2002)

Steps:

4. Find relationship between number of core residues and length of aa chain
5. Collect information about protein dimers and residues that form their subunits interface

G. Ackers et al. (2002)

6. Analyse the data

Thank you for your time!
